SUSPECTED PREECLAMPSIA ALGORITHM

Suspected Preeclampsia Flowchart
Diagnosis and Management

If borderline BP and new onset proteinuria, consider ATYPICAL PREECLAMPSIA especially if other signs/labs present (see below)

New Onset HTN? (>140/90)

YES

New Onset HTN? (>160/110)

NO

New Onset Proteinuria?

NO

Gest HTN

Preeclampsia

Check for Persistent:
- Headache
- Visual Changes
- Abdominal Pain
OR
- Thrombocytopenia
- Elevated LFTs
- Creatinine >1.2
- Elevated LDH

NO

Deliver at 37 weeks

YES

Deliver Now

Strongly Consider Transfer to 3rd Center

≥34 Weeks Gestation?

YES

Severe Gest HTN

Severe Preeclampsia

NO

NOTE: There are no longer real differences in management between Preeclampsia and Gestational HTN in BP Management and decision to deliver. TREAT BP ACCORDINGLY and DELIVER for abnormal labs or symptoms
